General Installation Notes:

Please read these instructions completely before beginning the installation. If you have any questions please call.

Before beginning the installation, disconnect the negative battery cable and use wheel chocks to block the vehicle's wheels.

Make sure the engine, transmission, body and frame are properly grounded.

We recommend applying anti-seize lubricant to all aluminum threads before final assembly.

Step 1: Remove any existing knob and bezel.

Step 2: Place the switch into position in the dash.

Step 3: Thread the new bezel into or onto the switch, and snug it down finger-tight.

Step 4: Slide the new knob onto the shaft until it bottoms out. Use a 5/64" Allen wrench to tighten the #8-32 x 3/16" set screw down on the shaft.
